- Latest security standards (improved WPA2-PSK plus static WEP 64/128 and WPA-PSK)
- SDHC compatible camera (www.eye.fi/cameras)
- WiFi enabled iPhone, iPad or Android device

Get Eye-Fi Connected

Eye-Fi cards are compatible with thousands of cameras, very likely including the one you already own. But, a variety of popular models from Canon, Nikon, Sony and other well-known brands have integrated additional Eye-Fi technology to improve your overall experience.

Cameras with the Eye-Fi Connected logo signify an improved user experience and, in some cases, advanced features. Eye-Fi connected cameras can detect when an Eye-Fi card is being used and most of these cameras will stay powered on until the photo & video uploads are complete, have an on screen icon signaling transfer activity and provide the ability to enable or disable Eye-Fi card WiFi via the camera menu. Some camera models will even identify which photos & videos have already been uploaded with an on-screen icon.

FAQ's

Can I use the camera I already own?

Eye-Fi wireless SD cards are compatible with thousands of cameras from the most popular and well-known brands. For specific compatibility information, visit www.eyefi.com/cameras

Is Mobi really that easy to set up?

Yes. On the back of the Mobi card case is a unique Activation Code. Simply install the Eye-Fi app on your compatible iPhone, iPad or Android device and enter the code when prompted.

How much storage can I get?

Mobi stores up to 8,000 photos or 6h of video with 16GB SDHC capacity and is supercharged with class 10 read & write speeds for fast action shots. Mobi also comes as 8GB capacity.

Do videos upload wirelessly too?

Absolutely. WiFi transfer supports many types of video files (each under 2GB per file), including .mpg, .mov, .flv, .wmv, .avi, .mp4, .mts, .m4v, .3gp

Is the WiFi upload secure?

Once paired to your device, the wireless network that the Mobi card creates is encrypted with WPA2 security and a unique (to each SD card) password. As long as you don't share that password, the transfer is fully secure.

Will Mobi upload content to my computer too?

Mobi connects your camera directly to a smartphone or tablet. To transfer photos & videos wirelessly to a desktop, try the Eye-Fi Pro X2 wireless SD card.
